

Assessment integrity without the black box.

Nigel captures assessment evidence with student consent, surfaces potential integrity concerns, and gives authorized reviewers at your institution a clear record for human decision-making. No lockdown browser, no behavioral scoring, no automated penalties.

0

Auto-suspensions, ever. No session ends by machine decision. Structural, not statistical.

0

Behavioral scores. AI flags objects and events in the environment, never gaze, keystrokes, or emotion.

100%

Of flags reviewed by a human your institution authorizes before anything happens to a student.

How it deploys

- **LTI 1.3** integration with Canvas, Blackboard, Moodle, and D2L; faculty enable per assessment
- **Chrome extension** for students; no lockdown application, kiosk mode, or OS-level install
- **Three policy tiers** per exam: Honor (attestation), Observed (consented capture), Verified (full evidence package with session receipt)
- **Optional 360 room camera**: consumer hardware, lending-pool friendly; webcam-only tiers need no hardware

Pilot timeline

- WEEK 1** LTI registration and per-exam policy configuration with your integrity office
- WEEK 2** Live reviewer training: review queue, evidence packets, appeals workflow
- WEEKS 3–4** Scoped pilot on low-stakes assessments, reviewed together before high-stakes rollout
- ONGOING** Dedicated onboarding contact, one-business-day support response, exam-window coverage at launch

Student experience

- Launches from the LMS assignment already open; normal browser, own tools, accommodations intact
- Live transparency beacon shows exactly what is captured at every moment; nothing records silently
- Every flag is appealable; students see the evidence, never a score

Security and data

- **FERPA school official model**: your institution owns and controls all evidence and decisions
- **Encryption**: TLS 1.3 in transit, AES-256 at rest; evidence packets hashed for tamper detection
- **Institution-controlled retention**: you set the window, deletion is enforced and certified
- **No secondary use**: no model training on student records, no sale or sharing of data
- **Sub-processors** (US processing): Anthropic, Vercel, Supabase, Cloudflare
- **SOC 2 Type II** preparation underway with an independent auditor; DPA with FERPA and GDPR processor terms available for counsel redline

Commercial model

- Annual institutional license or per-session pricing; written, itemized quote before the first monitored exam
- No live-proctor staffing fees; your existing staff reviews flags on their schedule
- Founding-cohort pilot terms for institutions shaping the product
